

Eco-House GUI Elements

GitHub: <https://github.com/smonz08/Capstone.git>

- Health
 - This element is used to track how many lives the player has left
 - When environmental mistakes are made, they will lose lives
- Power-ups Buttons (lightning bolt / clock)
 - These can be acquired by players when they accumulate enough points
 - The power-ups can be used during the game to increase abilities like speed and time control
- Level
 - This is an informative element that lets players know what level they are on
- Points
 - This will show the points accumulated during the level and become full when the player has earned enough points to successfully complete the level
- Settings Button
 - The settings button opens up the settings menu which will eventually have functionality to alter sound, brightness, exit to home screen, and change level
